

APS-U UPDATE

Jim Kerby

APS Upgrade Project Director

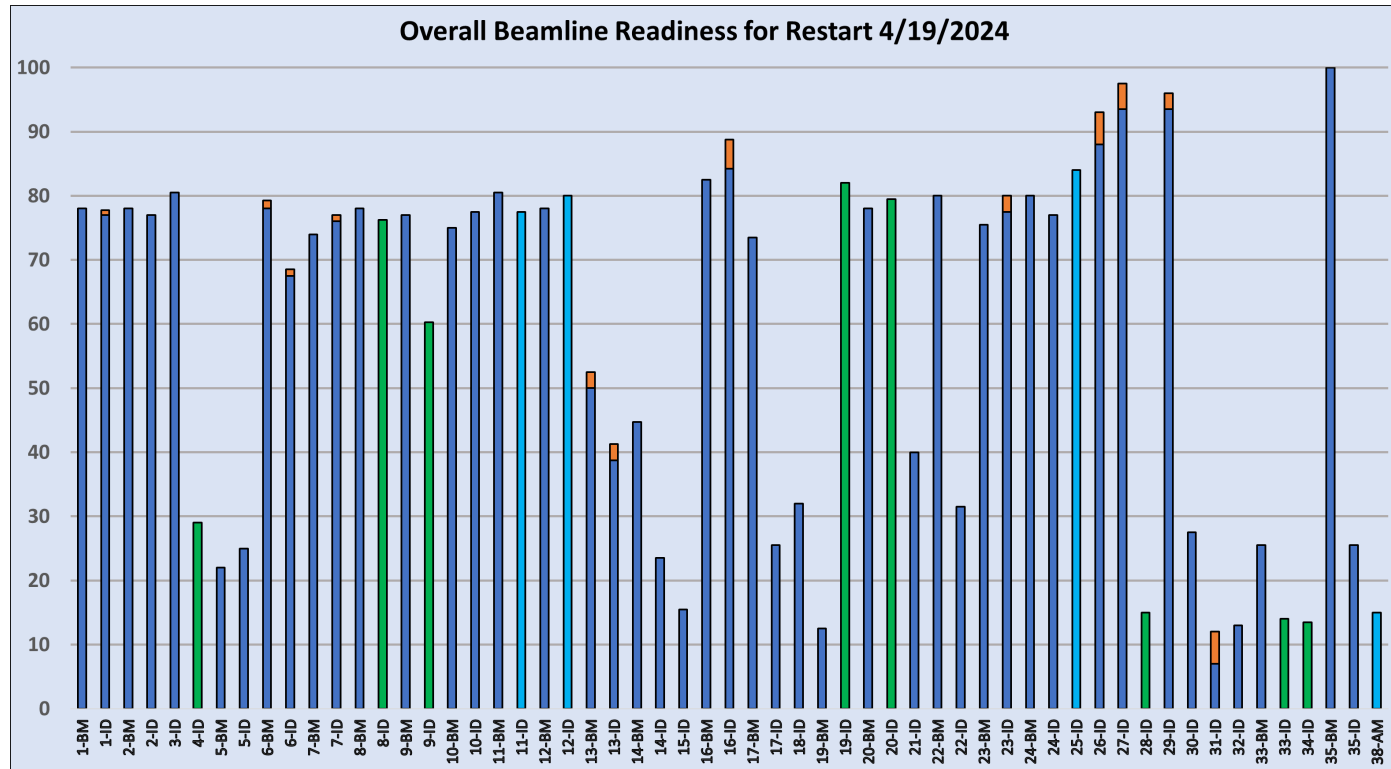

U.S. DEPARTMENT OF
ENERGY

Argonne National Laboratory is a
U.S. Department of Energy laboratory
managed by UChicago Argonne, LLC.

PREPPING FOR INSTALLATION

PDRC approves design – implementation and checkout follow

- Good progress across all beamlines
- Additional staff increased rate (before experiment floor closure)
- All work coordinated through Robert Winarski

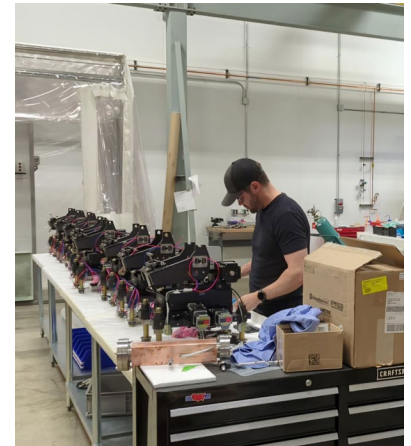

BEAMLINE PROGRESS

Current pause of work on experiment floor used for training and preparation/measurement of components

- Lots going on in Bldg 375, LOM 437 and Bldg 981
- Increased up front characterization of equipment and planning enables more efficient installation and checkout across all beamlines

When work on the floor restarts, **all safety guidelines will still be in force.** *PPE and work preparation are always in style*

The "7AM" slides are posted daily. Please review them!

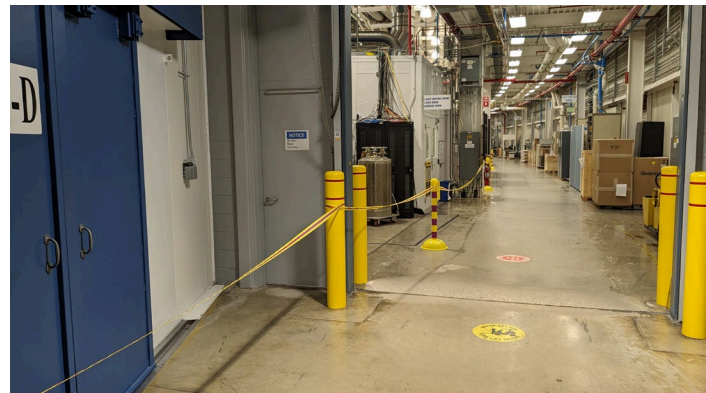

ONWARDS!

Completion and the start of commissioning of the Storage Ring is well worth celebrating! But work remains.

While completing that work, please stay open to learning, every day, and safely.

- For starters -- clean up after yourself – and always be aware of your surroundings!
- Local signage is the last word. If you have questions, ASK.

The storage ring will come up – let's keep working together to bring the whole facility back!

*Follow local signage! And our work areas *can* be kept tidy!*
