

Electronic-Document Control Note

The link: https://beam.aps.anl.gov/pls/apsweb/dcc0006.query_start_page

I suggest you bookmark it once you get there. The address looks like:

The screenshot shows the Argonne National Laboratory logo in the top left and "DCC - Query Screen" in the top right. A "WARNING" section states: "Federal US Government computer AUTHORIZED USE ONLY. Users have no explicit/implicit expectation of privacy. All files may be intercepted, monitored, recorded, copied, audited, inspected, disclosed to authorized law enforcement officials, domestic or foreign. Unauthorized improper use of system may result in disciplinary action, civil/criminal penalties. Using this system indicates your consent. LOG OFF IMMEDIATELY if you do not agree to these conditions. Read www.anl.gov/notice.html." Below this is a prompt: "Enter your APS LDAP Username (employees and resident users) and APS LDAP Password or Badge Number (non-resident users) and APS Web Password". There are two input fields: "Username or Badge No:" and "Password:". Below the password field are buttons for "Login", "Change Password", and "Reset". There are two links: "Click here if you forgot your APS Web Password" and "Click here if you forgot your APS LDAP Password". At the bottom, there are links for "APS Home Page", "Security/Privacy Notice", "Contact apuser@aps.anl.gov", and "Click Here for Important Notice Regarding Cookies".

As it suggests, there are two ways to sign on. One is the "APS LDAP Username". The other is by "Badge Number".

"APS LDAP Username" means your usual user name but with the same password you use to sign onto ICMS or Windchill. Not your Windows password.

"Badge Number" is self-explanatory, but the password you'd use would be your UNIX password. This is a little-used password these days, so unless you know what that is, sign on the other way.

Once successfully signed in, the system automatically takes you to a Query page. If that's what you required, all well and good. If you wished to take out NEW numbers (not look for ones already existing), click on the 'Main Menu' link, a blue text link near the bottom of the screen, and skip to Page 5 of this document.

A few notes about the Query (or Search) page:

First of all, it looks like this:

Important thing to know:

do NOT use wildcards! The search function will actually look for asterisks and never find what you're looking for...

The screenshot shows the Argonne National Laboratory logo in the top left and "Enter Search Criteria:" in the top right. There are several input fields: "DCN Number:", "CAE Number:", "WBS Number:", "LDN Number:", "Doc. Number:", "Engineer Badge:", "Designer Badge:", and "Title Of Drawing:". Below these fields is a "Submit" button. There are two links: "[Online Help | Main Menu]" and "Questions/Comments | Security/Privacy Notice". At the bottom, there is a "Log Out" button.

Explanation of the Query Page search criteria:

DCN Number: - this is the Document Control Note Number

- in the form of year, month, day, a dash, and then a simple counter number

Ex] 120113-04 meaning this was taken out in 2012 on January 13th, and it was the fourth one to be entered that day

- as there can be many parts/assemblies entered under a single DCN Number, this is the Search tool of choice if you're looking for LDN's you entered at one time. The list that results is restricted to just those things on that DCN no matter what different LDN numbers you took out.

CAE Number: - this is ?? *have no idea...*, we call it the A-Number

- in IntraLINK and Windchill metadata, it became '**Elec_File_Name**'

- a simple 7-digit counter number with an A at the front and two digits reserved on the end that reiterate the file's revision

Ex] A1424807 'A' is on the front, five digits for the count since the beginning of time, and a '07' on the end to signify this is the seventh revision to this file

- for all newly taken-out numbers, those last two digits are "00"

- as A-numbers are the easiest to enter for search criteria, just enter the "A" part of it (case doesn't matter) and as many of the next FIVE digits as you need because the last two are non-searchable. If you put in the entire number, it won't find it.

WBS Number: - consult the WBS Index to find what is required here and what the mess of numbers actually means

- See Angela Ross, she sends out a listing of the WBS Index every year or so...

- the way you see a drawing number is NOT how you search for it using this criterion

- your drawing may show "4105091012" for the WBS part of it, but you do not enter this into a DCN search line that way. **WBS Number** is entered as it shows in the official index, replete with all those periods and that beginning letter.

- as it's regrettably easy to put in two .'s or transpose a number, if at all possible, use some other way of searching

Ex] x.1.4.1.5.9.10.12 everything between and around the .'s means something in the WBS index. It's not very intuitive by any means, but don't worry. You get used to it.

LDN Number: - see Page 4 for a pictorial way of looking at how one applies LDN's

Doc. Number: - no idea, seems to be a count like the dummy A-number, but no one searches by this

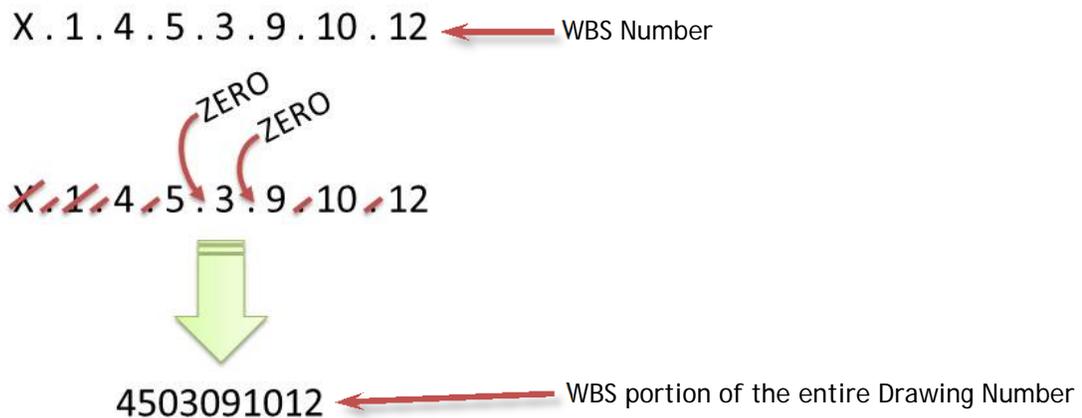

- Engineer Badge:** - obvious
- Designer Badge:** - equally obvious
- Title of Drawing:** - searches ANY of the 5 titles we use, again do NOT use wildcards
- case doesn't matter
-

Rules for how a WBS Number results in a Drawing Number:

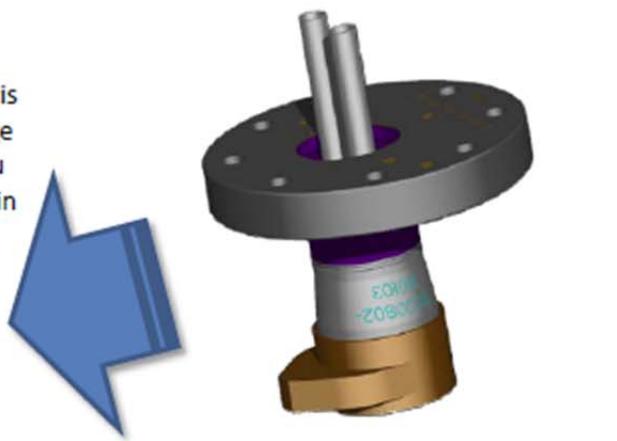

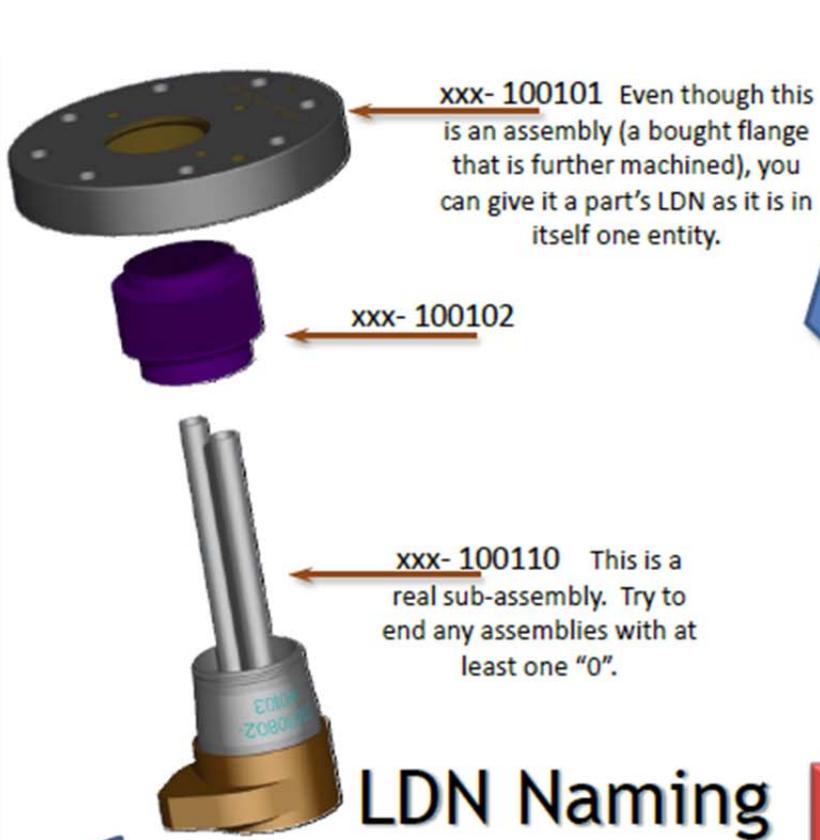

Ex] have a WBS of X.1.4.5.3.9.10.12

1. Drop the first letter if it's an X. We use L's, N's, and now U's, but not X's.
that leaves 1.4.5.3.9.10.12
2. Drop the first '1'.
That leaves 4.5.3.9.10.12
3. Replace all further periods with zeros except when that would violate any of the following:
 - a. it's the third (of the original numbers) over
 - b. it's a double digit
 - c. it's the fifth Sunday of the month

That gets you 4503091012 for your drawing number (used for a portion of the file name which appears on the official drawings). Pictorially, that looks like this:

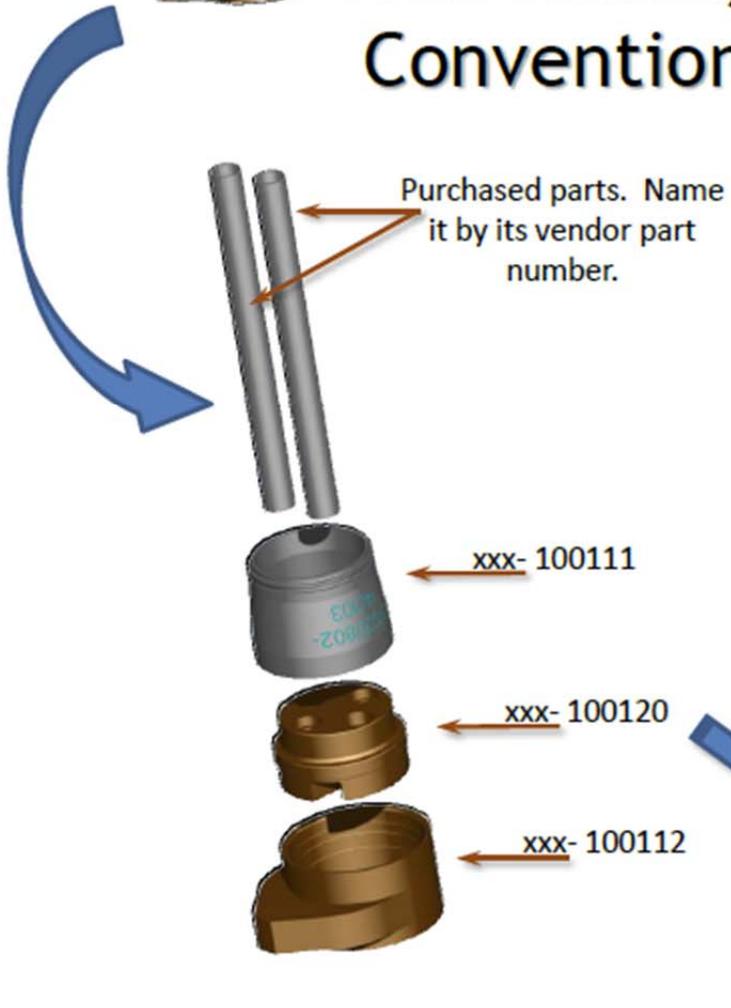

Given the arbitrary nature of these rules, consult the DCN that you first made when you took out your LDN. That document will tell you what the drawing number should be.

LDN Naming Convention

So, the LDN portion of the naming convention breaks down like this:

- xxx- 100100 (upper level assembly)
 - 100101
 - 100102
 - 100110 (sub-assembly)
 - 100111
 - 100112
 - 100120 (sub-assembly's sub-assembly)
 - 100121

Note: If you have more than 10 subcomponents to an assembly, just keep right on numbering them. (xxxx08, xxxx09, xxx10, xxxx11, etc.) For your first sub-assembly you might pick xxxx20 as your LDN (if there's enough room under that for all its subcomponents...)

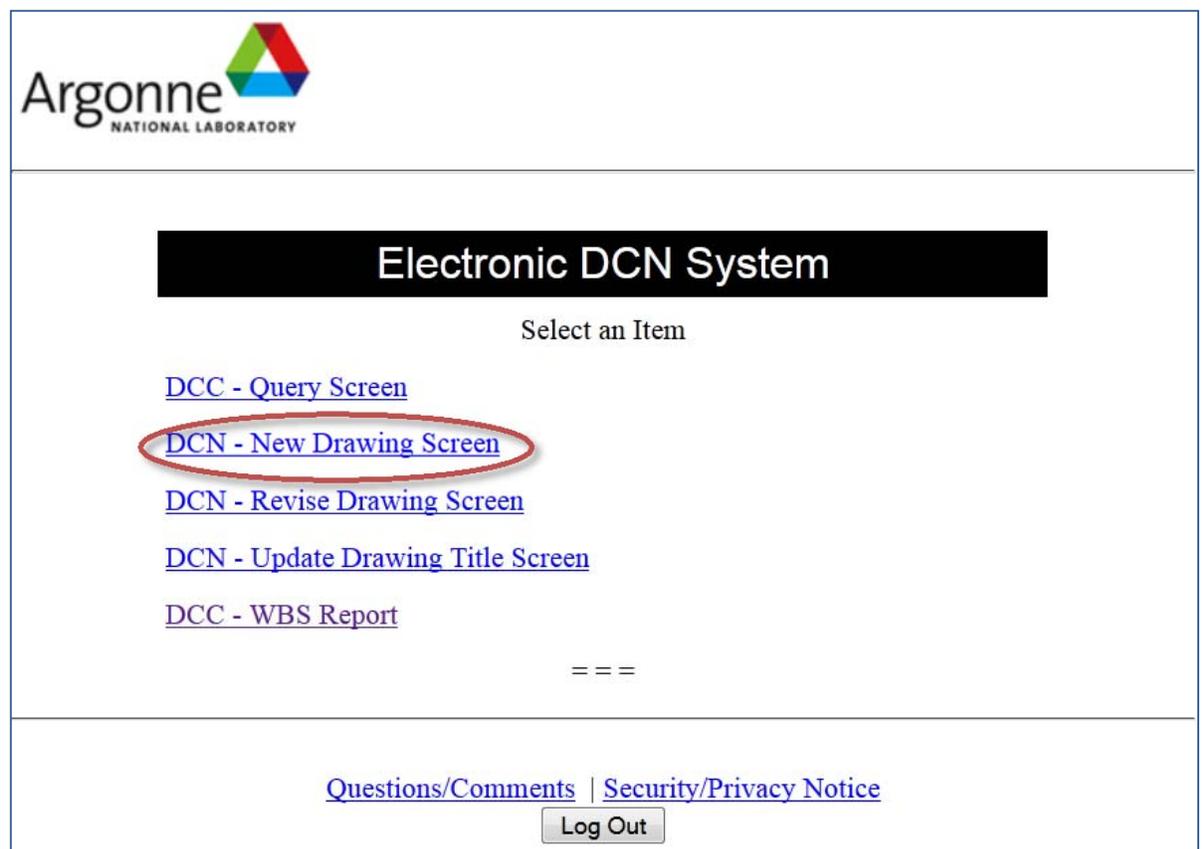

E-DCN - Taking out NEW Numbers

As the E-DCN system is not editable after a final '**Commit**' button is pressed, you usually save this step for the end of your designing effort. Once they've been taken out, LDN's take an Act of Angela to correct or obsolete any numbering mistakes. So best practice is that if you are at this point, you KNOW your assembly structure, your file titles, and your drawing sizes. It's also a good thing to know what block of numbers are available for your use. If you try to enter an LDN that already exists, the system will spit up an error message to that effect. Do a Query first. And *pleeeeee*, don't take out the next biggest 6-digit number like 300000 just because 210000 was used! Consider the breadth of your assembly and choose wisely. It might also behoove you to do a quick check in Windchill to see if someone is not also similarly inclined towards your proposed numbers. (It's happened...) Remember, *Act of Angela* to change things DCN-related. One more thing: know the badge number of the engineer for whom you're doing this. It's on the test later...

If you had to click on the '**Main Menu**' link, you're sent to a page that looks like:

Click on the link that's circled here.

Pretty straight-forward...

Log Out

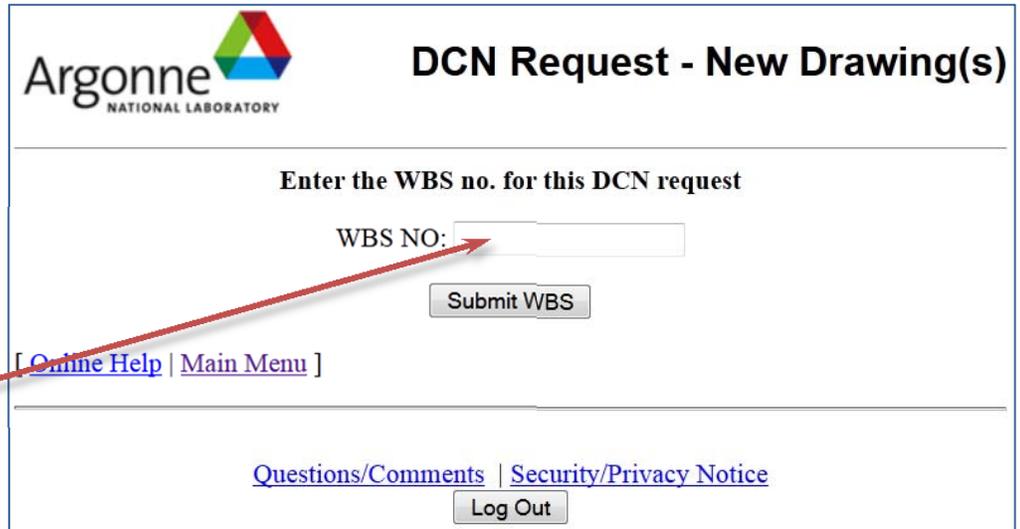

1. First window:

Usually, this is provided for you either on the IDP or by the engineer because they have a better understanding of where they want these drawings to fall in the structure of things.

Enter that info here

Ex] x.1.4.1.5.9.10.12

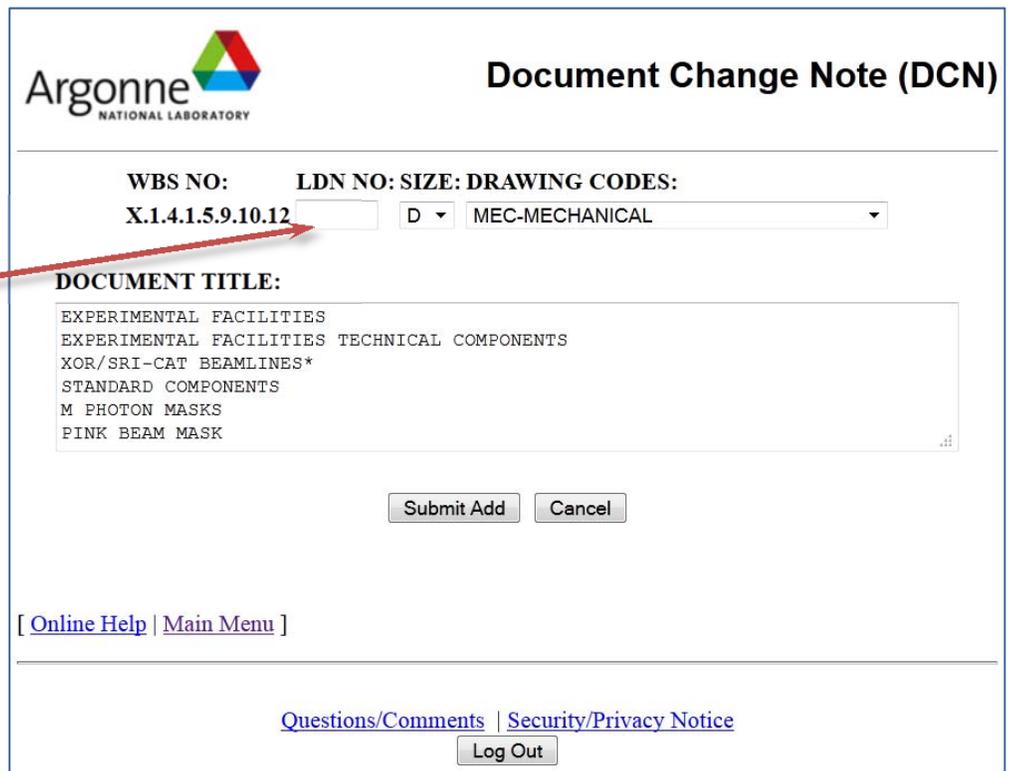

The case of the 'X' doesn't matter.

2. Second window:

You choose the LDN structure for your files. Please base it on your assembly structure!

The things you set here are LDN's, drawing size for that particular LDN, and the specific title (usually just messing with Title4 and Title5, the 4th and 5th lines respectively). You can't leave a 6th as there is no metadata equivalent in either our formats or Windchill itself.

Notes about this page... The first two lines tend to be redundant. In this instance, I'd delete the first line entirely, and as '**Standard Component**' is not particularly descriptive, I'd rid my drawings of that one too, in order to make room for *pertinent* titles. It's also an acceptable practice to piggyback short titles onto the same line if necessary. Like the 5th and 6th in the above example. I'd make one line of "M PHOTON MASKS / PINK BEAM MASK" if I needed a line. Also, drawing sizes default to D-sized. Please change that to reflect the size used in your drawing for this LDN. The 'MEC-Mechanical' is a default and we hardly ever change that.

3. Upon hitting the above 'Submit Add' button the first time, you get the following:

Note the directions here. They're very helpful.

If upon looking over this page, you notice you made a mistake, click on the LDN's link to correct it. Please note, when you choose to Update an LDN, the drawing size will default back to D whether or not you chose that originally.

If you have more than one LDN to take out, you hit the "Add" button.

Argonne NATIONAL LABORATORY DCN Detail

- DO NOT use the back button on the browser to add a drawing to this DCN.
- Click on the LDN link to make changes to the drawing record.
- Use the add button to add a new drawing record to this DCN.
- Use the Done Details button if you are done entering in all of the drawing records for this DCN.

WBS	LDN	Type	Dwg Code	Size	Document Title
X.1.4.1.5.9.10.12	100250	DW	MEC	C	EXPERIMENTAL FACILITIES TECHNICAL COMPONENTS XOR/SRI-CAT BEAMLINES* M PHOTON MASKS / PINK BEAM MASK MY ASSEMBLY'S TITLES MY 100250 ASSEMBLY'S DESCRIPTIVE TITLES

[[Online Help](#) | [Main Menu](#)]

[Questions/Comments](#) | [Security/Privacy Notice](#)

When you're done taking out all the LDN's that belong on this DCN, hit the "Done Details" button.

3.5 So, if you had three LDN's to take out, the page would eventually look like this:

If those are all the numbers you needed, click the "Done Details" button.

Argonne NATIONAL LABORATORY DCN Detail

- DO NOT use the back button on the browser to add a drawing to this DCN.
- Click on the LDN link to make changes to the drawing record.
- Use the add button to add a new drawing record to this DCN.
- Use the Done Details button if you are done entering in all of the drawing records for this DCN.

4. This sends you to the **Header Information** page (or the **Save** page), which is the second-to-the-last chance to correct mistakes to LDN names and/or sizes (*by hitting your browser's **Back** button*).

Never found out what the "Originator" was... so enter your own badge number for it.

Remember when you were told to note your engineer's badge number? This is why. Enter it here.

Enter *your* badge number.

Enter *fitting* comments...

Hit the "**Save**" button.

Header Information

WBS	LDN	Type	Dwg Code	Size	Document Title
X.1.4.1.5.9.10.12	100250	DW	MEC	C	EXPERIMENTAL FACILITIES TECHNICAL COMPONENTS XOR/SRI-CAT BEAMLINES* M PHOTON MASKS / PINK BEAM MASK MY ASSEMBLY'S TITLES MY 100250 ASSEMBLY'S DESCRIPTIVE TITLES

[Questions/Comments](#) | [Security/Privacy Notice](#)

Once committed, you get one or the other of the following (a pdf-version or the system's web-page output). If in doubt of the translation of WBS-Index-speak to an actual drawing number, these pages will tell you what your drawing number should be. You'll also find your A-number and your DCN with titles and LDN's.

[\[Online Help | Main Menu \]](#)

Post-Notes:

1. The titles themselves are about the only thing editable once you've committed to taking out the LDN. If you found your title has changed or you misspelled something, just go back to the **Main Menu** and choose "**DCN - Update Title Drawing Screen**" and correct it.
2. As far as I know, in the steps before committal, there is no way to remove an LDN you've proposed to take out. You can change it into a number you *do* want, but you cannot remove the entry from your list of drawing numbers. You have to go back to the beginning and shorten your list. This is one reason to know structure and available numbers beforehand.
